

Regal Power Tower FCT Install

Install clamps on the forward tube of the tower just above the top oval crossbar on the tower. The bottom clamp will almost be touching the oval crossbar.

Keeping the clamps slightly loose, install the mounting plate. Use the slots and the clamps to level the top of the plate with the floor of the boat while adjusting the plates to parallel with each other, front to back. Tight bolts slightly to hold in place; more adjustments may need to be done.

Remove screws and loosen set screws in jaw slides on the frame, and mount the frame on the mounting plate.
